Present
time

Front-End Developer

"WhiteGen"

During my time at "WhiteGen," I worked on developing and creating websites of various themes, including: Landing Page, Multi Landing Page, Market Land, Market with Basket, Game Site, Showcases, and Blog. These projects were implemented using various libraries, JavaScript code, and macros. Each completed project was unique and required an individual approach, allowing me to develop skills in creating adaptive and highly functional web solutions. I also actively applied modern approaches in web design and user interface optimization, contributing to the overall quality and performance of the websites.
